DETAILED ACTION

Claim Objections

1. Claims 6-10 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim 5-9. See MPEP § 608.01(n). Accordingly, the claims 6-10 are not been further treated on the merits.

2. Claims 1-5 are objected to because of the following informalities:

The transition phrase "characterized in that" should be replaced by "consisting", "comprising", "including" or similar other transition phrase. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Wittenbreder, Jr. (U.S. Patent # 5,402,329).

Wittenbreder Jr. disclose claimed invention a resonant converter (figure 7), including two secondary windings of different winding directions (column 7, line 1-5).

Art Unit: 2838

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 2-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wittenbreder, Jr. (U.S. patent # 5,402,329) in combination with Rilly et al. (U.S. patent # 5,448,469).

Wittenbreder, Jr. disclose the claimed invention as explained in the claim 1, except the utilization of the technique for the transformer has a first group of secondary with one or more secondary windings, at least two of the secondary windings being electrically connected to one another. Rilly et al. teaches similar technique for the transformer has a first group of secondary with one or more secondary windings, at least two of the secondary windings being electrically connected to one another (figure 1). It would have been obvious one having an ordinary skill in the art at the time the invention was made to modify Wittenbreder, Mr.'s power converter by utilizing the technique taught by Rilly et al. for the purpose increasing efficiency of power conversion.
